PIPE RECOVERY

PIPE RECOVERY
SOLUTIONS

The standby pipe-recovery package can be tailored to our customers' project. Prior to drilling we can determine what cutters, punchers, severing tools or other pipe recovery tools are required based on the workstrings that are used over the course of drilling activities that have a higer risk of getting stuck downhole.

All dangerous goods or longer lead items can be packed in one of our mobile bunkers and placed onboard the rig when drilling commences. This will be a huge time saver when it comes to piperecovery operations. There's no need to wait for dangerous good shipment and/or availability, the right tools are already onboard.

Any additional equipment required (if any) is heliportable and can be transported upon call off. This ensures that lost time due to any stuck pipe or BHA is kept to an absolute minimum.
